

### CFRI participants

**+46** registry participants

**1342** participants in CFRI in 2022  
Registered, alive & not lost to follow-up.

**824** adults

**518** children <18

**Male 57.3%**

**Female 42.7%**

**97.86%** of individuals had data from a clinic visit recorded in 2022

### Age distribution

Median predicted age of survival\*

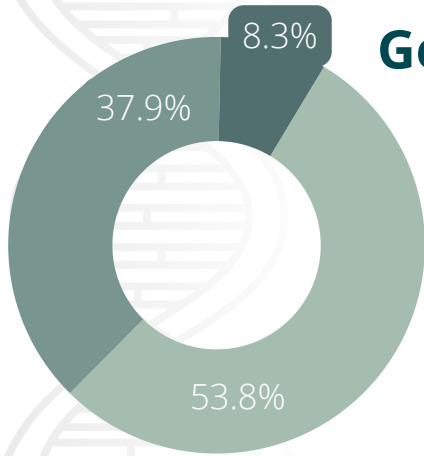

**45.7** 2013-2017

**50.8** 2018-2022

**15.1%** of the CFRI population is over 40

\*The median predicted survival age predicts how long we can expect half of people with CF born today to live

### Genotype

- F508del/F508del
- Heterozygous F508del
- Not F508del

**15** pregnancies were recorded in the CFRI

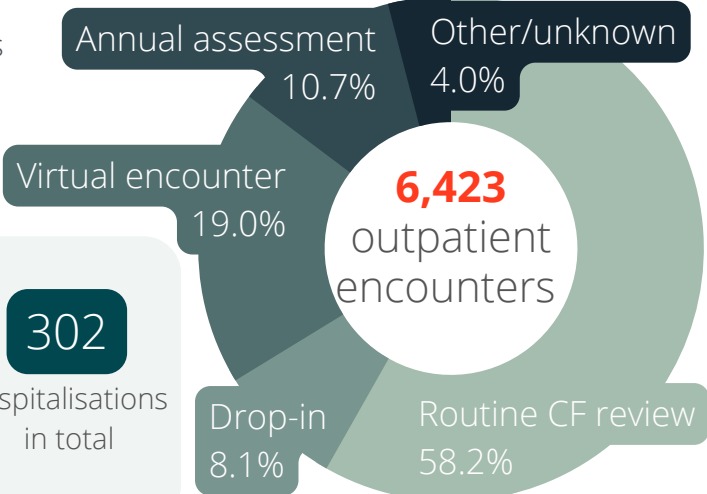

**21** new-borns diagnosed with CF\*

\*Via the National Newborn Bloodspot Screening Programme

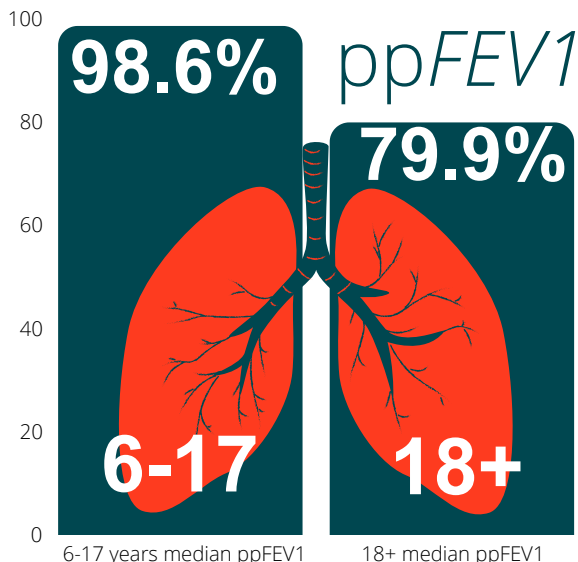

### Hospitalisations

**302** hospitalisations in total

**Outpatient visits**

### Microbiology

	<18	18+
Chronic <i>Pseudomonas aeruginosa</i>	1.2%	11.0%
Chronic <i>Staphylococcus aureus</i>	20.1%	8.8%
